

METHODS AND APPARATUS TO ASSOCIATE BOOT OBJECTS
WITH TRUST CREDENTIALS

ABSTRACT

Methods and apparatus to associate boot objects with trust credentials are disclosed. In one example a method of booting a processor system includes accepting a selection of a desired operating system to be booted, accepting a user credential associated with a user who has selected the desired operating system to be booted, and determining if the user credential corresponds to the desired operating system to be booted. Additionally, the example disclosed method includes enabling booting of the desired operating system if the user credential corresponds to the desired operating system.
